SUMMARY

Mobile Engineering Leader with 12+ years of experience building and scaling iOS applications used by 1M - 20M users across fintech, healthcare, and consumer domains. Proven leader of cross-functional mobile teams (5-12 engineers), accountable for technical direction, reliable delivery, and codebase health. Deep expertise in SwiftUI, Swift Concurrency, clean architecture, dependency injection, real-time data systems, and agentic AI system design. Proven ability in system design, architecture reviews, and critical-path implementation, while mentoring engineers and setting iOS engineering standards. Track record of reducing crash rates by 40%, improving performance by 35%, accelerating release cycles, and sustaining an average 4.6★ App Store ratings in regulated environments across apps.

EXPERIENCE

Lead iOS Engineer

May 2024 - Present

Freelance

- Built an 8-agent iOS development pipeline ([pragma](#)) using Claude Code, automating the full feature lifecycle: spec, plan, feature, gates, review, test, bugfix, and release. Human approval at 2 of 8 stages; all other phases run autonomously until merge.
- Implemented a persistent memory layer shared across all agents, ensuring decisions made in spec are not re-litigated in review and mistakes caught in one feature do not repeat in the next.
- Developed a production-grade SwiftUI + SwiftData iOS app ([FinanceTracker](#)) built entirely by the pipeline, including MVVM + Repository architecture, @ModelActor CSV import with structured concurrency, VersionedSchema + MigrationPlan for safe schema evolution, and MCP integration replacing text-parsed build output with structured JSON errors.
- Contributed a SwiftData testing skill built from this pipeline's real bugs to [Swift-Agent-Skills](#) (2,500+ GitHub stars), the agent-skills directory maintained by Paul Hudson, founder of Hacking with Swift. Also published pragma itself to [Claude Code Directory](#), a community-curated catalog of Claude Code plugins.

Senior iOS Application Engineer

April 2023 - May 2024

Medidata Solutions

- Senior technical point of contact for the [myMedidata](#) iOS app supporting 11M clinical trial participants and 1M monthly active users in a HIPAA-regulated, high-availability environment.
- Led migration to Swift Concurrency (async/await) and Combine across key modules, reducing background task latency by 25% and lowering user-facing API timeouts; documented changes for compliance audits.
- Architected scalable, modular iOS codebase with clean separation of concerns, enforcing dependency injection, MVVM, and OOP design patterns to improve state management across async data flows.
- Partnered with product and design to refine user flows, directly contributing to a sustained 4.7★ App Store rating in a highly regulated domain.
- Mentored mid-level engineers through code reviews and design discussions, reducing rework and improving sprint predictability.

Lead Software Development Engineer

June 2021 - April 2023

Fiserv

- Tech Lead for [CardValet](#), a consumer fintech app serving 5M users across 1,000+ financial institutions.
- Owned roadmap and delivery for a 10-engineer iOS team: introduced sprint readiness gates and a 2-week release cadence, improving on-time delivery from 60% to 88% and reducing sprint rollovers by 45%.
- Reduced end-to-end feature turnaround time by 40% by improving backlog readiness, enforcing smaller PRs, standardizing review practices, leading architectural decisions for REST API data contracts and UI design across iOS and Android teams.
- Designed and maintained CI/CD pipelines (Fastlane, Jenkins, Bitrise), cutting release preparation time by 30%, improving release safety and enabling predictable weekly releases.
- Worked closely with the security team to integrate mobile protection tooling, ensuring compliance without degrading app performance or developer velocity.

Fiserv

- Led the technical redesign of the [CardValet](#) app, modernizing architecture while providing security and control features for millions of users.
- Introduced structured unit, integration, and XCTest to reach 70% coverage and reduce regression bugs by 35%.

Career Transition**June 2018 – March 2019**

- Evaluated iOS opportunities across fintech, healthcare, and consumer domains before joining Fiserv.

iOS Engineer**August 2016 - May 2018****WW International (Weight Watchers)**

- Delivered major UI/UX improvements including custom UI components and efficient UI rendering to the [Weight Watchers](#) app during peak growth period (4.6M users, 4.8★ App Store rating), including HealthKit integration.
- Owned development and releases for custom cocoapods for shared platform library components.

EARLIER EXPERIENCE

SapientNitro (Publicis Sapient) - iOS Developer (2014 - 2016) • Architected robust, scalable, feature-rich applications for major clients like [Miami Heat](#), Ann Taylor/LOFT, and ADT, integrating Core Bluetooth.

Viacom - iOS Developer (2014) • Built the first version of Viacom's [Paramount Network](#) streaming app, featured as the **Best New App** in Entertainment.

CVS Caremark - iOS Developer (2014) • Delivered [CVS Pharmacy](#) app's ExtraCare feature, including data persistence for rewards and coupons.

NYC Dept of IT and Telecom - iOS Developer (2013 – 2014) • Built the official [NYC 311](#) app for non-emergency services, improving community engagement by 35%.

Genworth Financial - iOS Developer (2013) • Built enterprise iPad app, integrating Salesforce and SAP workflows.

Vanguard - iOS Developer (2012 – 2013) • Created the Markets Section of the [Vanguard](#) app, displaying real-time financial data.

SKILLS

Mobile & Architecture: SwiftUI, Swift, UIKit, Swift Concurrency (async/await), Swift Combine, Clean Architecture, MVVM, Dependency Injection, OOP & Design Patterns, Modular Architecture, Objective-C, REST/JSON web services, Swift Package Manager, CocoaPods

State & Data: Complex state management, Core Data, UserDefaults, data persistence, real-time data streaming, offline reliability

AI & ML: Multi-agent orchestration, Agentic AI pipeline design, Claude Code, MCP (Model Context Protocol), LLM-assisted developer workflows, On-device inference, Core ML conversion & optimization

Performance & Reliability: Instruments, crash-free optimization, cold start reduction, Charles Proxy, async data, Crashlytics, VoiceOver

DevOps & Quality: CI/CD (Fastlane, Jenkins, Bitrise), TestFlight, Firebase, automation, code quality systems, TDD, unit testing, integration testing, XCTest, App Store Connect

Leadership: Architectural decision-making, team management, mentoring, cross-functional alignment, technology roadmap & strategy, agile development life cycle (sprint planning, backlog grooming, standups, retrospectives), production support, operational excellence

EDUCATION

M.S., Computer Science (2012)

George Mason University

B.E., Information Technology (2010)

University of Mumbai
